## Upgrade licenses for use with Imaris 9.7

With Imaris 9.7 we introduce a new type of license identifiers that are not compatible with the old licenses. It is therefore necessary to update the licenses. This is possible without generating new licenses in bitbase manually and without entering an order id in Imaris configurator. If you work on a node locked license for Imaris 9.6 and are still under maintenance, the Imaris 9.7 licenses can be downloaded automatically using ImarisConfigurator.

Follow these steps:

- Install Imaris 9.7.0 alpha0
- Start Imaris 9.7.0

Upon start, Imaris states that there is no license.

• Click Ok (it is maybe necessary to click more than once)

• Click on the button to start the Configurator

• The configurator shows that there is no valid license
